SAINT-GOBAIN ABRASIVES

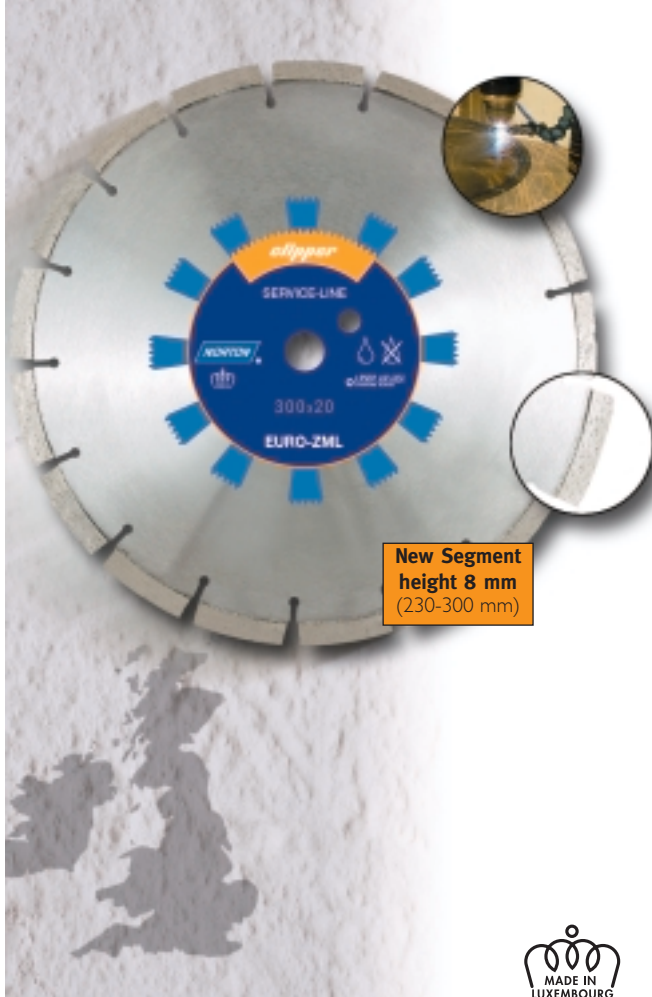

Clipper ▶ Euro-ZML

Arguably Europe's top selling diamond blade, the Euro-ZML gives excellent all-round performance across a whole range of materials from reinforced concrete lintels to hard facing bricks. Performing equally well wet or dry, this high quality product is now enhanced by new increased-height segments giving a full 8 mm depth of diamond impregnation. So, it's even longer-lasting high performance at no extra cost to the customer!

Euro-ZML PRO-LINE

**LASER WELDED
DIAMOND BLADES**

**New Segment
height 8 mm
(230-300 mm)**

Available from 100 mm to 450 mm

• **Laser Welded for safety and reliability**

Back in the 1980's Norton virtually transformed the diamond blade market by inventing the laser welded segment. Today, with every one of its laser welded blades fully guaranteed against segment loss, Norton continues to make operator safety and reliability a priority issue.

• **Proven High performance**

The Euro-ZML's ongoing high performance extends across a wide range of medium to hard materials and embraces both dry and wet cutting. Compared with an equivalent conventional abrasive disc the competitively priced Euro-ZML yields around ten times the life, thus making cost effective cutting a major attraction.

• **Broad based applications range**

Designed primarily to handle a comprehensive concrete/brick applications range, the Euro-ZML performs well across at least sixteen distinctly different types of building and construction industry materials. From hard flint concrete and granite, the Norton blade is equally at home slicing through medium hard building products such as block paviors and facing bricks, as well as concrete kerb and paving slabs.

• **A size to suit the purpose**

The Euro-ZML is available in diameters from 100 to 450 mm, all of which are suitable for wet or dry cutting. This versatile blade can be used with angle grinders, petrol saws or masonry saw benches and will provide efficient cost-effective cutting in every appropriate operation.
